RESTART BUILDER RENOVATION

Frisco Kitchen & Bath Cost Guide

A practical 2026 planning guide for homeowners who want a beautiful remodel without vague numbers, missing scope, or budget surprises.

$10K-$130K+

Kitchen projects span a wide range because a surface refresh and a complete footprint redesign are not the same job.

$5K-$45K+

Bathroom budgets change sharply by room type, waterproofing, tile work, fixture level, and plumbing movement.

Planning ranges, not quotes. A site visit and written scope are required for accurate pricing.

BUDGET FIRST

Start with the right planning band

The most useful question is not “What is the average?” It is “Which scope are we actually buying?” These ranges help you choose the right starting point before design selections and a site inspection.

KITCHEN · MINOR

$10K-$20K

Targeted visual improvements with a mostly unchanged footprint.

KITCHEN · MAJOR

$20K-$65K

More extensive cabinet, surface, lighting, flooring, and appliance work.

KITCHEN · COMPLETE

$65K-$130K+

Full redesign, custom work, premium selections, and possible structural changes.

BATHROOM · BY ROOM

$5K-$45K+

Powder, guest, and primary baths belong in different planning bands.

Frisco planning rule: treat these as scope bands, not promises. Home age, hidden damage, access, permit requirements, finish choices, and trade coordination can move a project outside the band.

Usually keeps cost lower

- Keep plumbing and appliance locations.
- Use stock or semi-custom cabinetry.
- Choose porcelain or quartz over specialty stone.
- Finalize selections before construction.

Usually pushes cost higher

- Move walls, plumbing, gas, or electrical.
- Add custom cabinetry or millwork.
- Choose large-format or intricate tile.
- Change scope after work begins.

Kitchen bands follow Angi’s 2026 national scope ranges. Bathroom bands use a Fort Worth contractor’s published 2026 room-type ranges and Angi’s Dallas cost data. See sources on page 6.

KITCHEN

Layout and cabinetry drive the kitchen budget

A kitchen can look completely different without moving every utility. Decide whether the goal is a finish refresh, a major upgrade, or a full transformation.

MINOR

$10K-$20K

Best for a focused refresh

Keep the footprint and target the surfaces with the biggest visual impact.

- Cabinet paint or selective refacing
- Hardware, backsplash, paint, and lighting
- Limited countertop or appliance updates

MAJOR

$20K-$65K

Best for function plus a new look

Replace more of the room while limiting structural changes.

- New cabinetry or a substantial cabinet package
- Countertops, backsplash, sink, lighting, and flooring
- Appliance upgrades and moderate electrical or plumbing work

COMPLETE

$65K-$130K+

Best for a full redesign

Change flow, footprint, storage, and finish level together.

- Custom cabinetry and premium surfaces
- Island changes, wall changes, or utility relocation
- High-end appliances and layered lighting

> **Spend where you touch the room every day:** cabinet function, durable counters, task lighting, ventilation, and storage. A dramatic finish is not valuable if the workflow still frustrates you.

Before requesting bids, decide these four items

- ✓ Keep or change the footprint
- ✓ Keep, paint, reface, or replace cabinets
- ✓ Appliance package and dimensions
- ✓ Target finish level: practical, premium, or luxury

BATHROOM

Wet-area complexity sets the bathroom budget

Bathrooms concentrate plumbing, electrical, ventilation, tile, glass, cabinetry, and waterproofing into a small footprint. Room type is the fastest way to set a realistic range.

POWDER ROOM

$5K-$10K

Compact, mostly cosmetic scope

Vanity, toilet, mirror, lighting, paint or wall finish, and flooring, usually with no shower or tub.

GUEST OR HALL

$15K-$20K

Full replacement on a simpler footprint

Tub or shower surround, vanity, fixtures, tile, lighting, paint, and necessary wet-area preparation.

PRIMARY BATH

$25K-$45K

Higher fixture count and custom work

Larger shower systems, double vanities, frameless glass, more tile, storage, and possible plumbing or layout changes.

> **Dallas reference point:** Angi's 2026 Dallas bathroom guide reports a typical range of $6,380-$17,216, while also showing much wider ranges for larger rooms and designer finishes. Published local contractor ranges are higher for full-scope guest and primary baths because the included work is broader.

Never leave vague

- Waterproofing system
- Shower pan and drain
- Tile limits and pattern
- Glass type and hardware

Worth deciding early

- Tub versus walk-in shower
- Vanity size and storage
- Fixture finish and lead time
- Ventilation and lighting

PROTECT THE PROJECT

Five decisions prevent most budget surprises

A clear proposal is more valuable than a low headline number. It tells you what is included, what is excluded, and how changes will be handled.

1. **Freeze the core scope**
   Write down what stays, what moves, and what gets replaced before comparing bids.

2. **Set finish allowances**
   Assign realistic budgets for tile, fixtures, cabinetry, countertops, and hardware.

3. **Confirm permit responsibility**
   Frisco requires permit applications before construction that modifies or improves an existing structure. Confirm which parts of your scope require approval.

4. **Use written change orders**
   Every added item should show price and schedule impact before work proceeds.

5. **Keep a contingency**
   Reserve funds for concealed damage, outdated systems, code corrections, or selection changes.

6. **Sequence selections early**
   Approve long-lead cabinets, glass, fixtures, and specialty tile before demolition when possible.

Compare bids line by line

Scope item	What a clear proposal should state
Demolition	Removal limits, protection, haul-off, and disposal
Behind the finish	Framing, substrate, waterproofing, plumbing, and electrical
Finish materials	Exact selections or dollar allowances
Permits	Who applies, what is included, and inspection responsibility
Closeout	Final cleanup, punch list, warranty, and care information

READY TO PLAN

Bring four things to your free estimate

You do not need a finished design to start. A few clear inputs let the contractor understand your priorities and identify the questions that affect price.

01

Photos of the current room

Include wide views, problem areas, and anything you want to keep.

02

Your must-haves

List the three improvements that matter most to daily life.

03

Your planning range

Share a comfortable target and a firm upper limit.

04

Your timing constraints

Mention travel, move-in, hosting, or work-from-home needs.

Plan your Frisco remodel with a clear scope.

Restart Builder Renovation serves Frisco and the Dallas-Fort Worth metroplex.
